HUNT BIG METEORITE

Huge Mass of Iron Knocked Hole

in Earth in Arizona

Such is Belief of Prof. Elihu Thomson

-Movement Started to Find Im-

mense Piece of Ore Belleved

Phoenix, Ariz.-About the origin of

most of the cruters of the earth's sur-

face there is little dispute. They are

of all sizes. We find them in the

Sandwich Islands, with floors from

three to four square miles in area. These have reminded Professor Pick-

ering of nothing less than the ring

craters on the moon. In Arlzona. near Canon Diablo, is a cruter-like depression 4,000 feet in diameter and

00 feet deep. The rim can be seen

from a great distance, and, such rims

regular contour of the rim is marked

by broken rocks, some as large as a

house. The outer slopes down to the

plain are covered with similar masses.

pleces of many tons weight having

seen thrown thousands of feet away

rom the crater. But there is no

ava about the butte, and this would

eem summarily to dispose of the idea

Thomson, in a letter to the American

institute of Electrical Engineers, re-

down the outer slopes of the crater

are sent to all parts of the world as

ninds us that the masses of iron flung

to Be Worth Millions.

MINES AND MINING STOCKS

A GREAT FUEL CONSUMER Pittsburgh Burns Nearly as Much

Greater New York. More fuel is consumed in the ciof Patishurgh and its immediate vicin ity, and more coal is shipped to an through the Pirtsburgh district, thu in any other district in the world, ac cording to Edward W. Parker of th United States Geological Survey. Wit that of Greater New York the conaumption of coal alone in Pittsburg is nearly equal to that of the much larger city. Greater New York con sumed in 1911 approximately 19,000. 660 short tons and Pittsburgh used about 16,500,000 short tons. But Pittsburgh consumes several million tons of coke and considerable quantities or natural gas, which added to the coal consumption, gives that city

comparisons are will more striking Pittsburgh's business exceeding the of New York for nearly 50 per 1971 the total coal traffic in New York harbor, including the city concomption, the transchipments to New England and up-river points, and the bunker and export trade, amounted to opproximately 18,000,000 about tons whereas the coal traffic of Pittsburgh including rail elifements test and rail oul water shipments west, amounted to nearly \$2,000,000 tons.

In the total movement of coal t Pittsburgh and points east and west thereof there was an increase in 1913 g 1.974,785 tome over 1910; all of the increase being in the shipment through or from the district. On we count of the depression in the inami steel trade the local consumption coal at Pittsburgh decreased abou 1.214.000 tons, or from 15.600,654 to in 1919 to 14,149,644 tons in 1911. The rall shipments to Pittsburg decrease about 1:000,000 tons and the water abluments about 250,000 tons. decrease in the consumption of coke was, of course, much larger. Th nements of cost both east and west however, showed increases, western ahipments increasing from 24,453,581 tons to 25.291,264 fone; all up water shipments to lower Mississiphi Rive points, and eastern shipments, all eaincreasing from 10.781.544 tons to 12 165,866 form. The water ablument were the largest since 7997.

BROKERS' GOSSIP

Representatives of forty-live stoexclusings houses responded to the unfor a meeting at the offices of A. S Leland & Co. to consider affairs of Franklin and Indiana. A committee of five, consisting of Herbert M. Leland, chairman, Irving J. Sturges, o Gay & Sturges, Harry M. Stonemet of L. W. Howen & Co., H. L. Foster or Paine, Wester & Co., and Joseph In Crother of Edwards & Crocker, wer appointed to confer with Presiden Edwards not only as to the presen Spanelal status of the company, as aw to future policy.

U. S. Fuel Vessel Jupiter In First Electrically Driven Seagoing Vessel.

Vallejo, Cal.-The United States fuel ship Jupiter, the first electrically driven sea-going vessel ever built and the largest ship of any description ever laid down on the Pacific Coast, was launched at the Mare Island Navy Yard. The Jupiter will make about 14 knots an hour. She is 572 feet long by 65 feet beam, draws 27 feet 6 inches, displaces 19,360 tons, and has carrying capacity of 12,500 tons of coal and 375,000 gallons of fuel oil. The keel was laid in October 16 last, and your repast is bound to be successful. the hull has been built in record time, at a saving of nearly \$100,000 over the appropriation of \$1,200,000

allowed by Congress. Power is supplied by a 14,000-horse ower electric generator. Coal can be loaded from the Jupiter into a warship at the rate of 100 tons an hour, and duplex pumps wil permit her to take in or pump out oil to another vessal at the rate of 120,000 gallons an an," by Anne Warwick.

PRIVATE WIRE.

Boston, Mass. Oct. 9.-The local market sold off slightly at the opening owing to weakness in New York but after the first few minutes new buying orders came in and prices rallied. There was steady absorption of North Butte throughout the session and we look for this stock to sell much higher. The Balkan situation seemed to be the disturbing element in the New York market and many stocks were pressed for sale by houses with foreign connections. The government crop report was issued today and was about as expected and this had little or no effect on prices. We still believe that advantage hould be taken of all weakness in our local market to take on som of the better class of copper stocks,-Foster.
